

## IST 263 Project Milestone 4 – Wireframes

**Name:**

**Description:**

Please paste your project description from Project Milestone 1 here (or most current if you've changed your project idea).

I'd like to make a webpage for a project I did last year about the street vending system in NYC (The project already had a website that uses the templet from wix.com, I'd like to see if I can make a new webpage). The first page would be the home page of the project, introduce what it could do to the community. The second page would be the About Us page that introduce the mission and prospection of the project. The third page would cover the detailed phases of forming the proposed the new system, how it might function, and a detailed handbook attached to it. The fourth page could be a communication page for the community that street vendors in the project could post their experience and feedback on the website and would also have a contact and donation filed on the page.

**Research:**

Write down the urls of three websites you looked at to research layout for the type of site you are creating. For example, if I was creating an auction website, I might look at pages on <https://www.ebay.com/>.

url1	<a href="https://upstreamint.org/">https://upstreamint.org/</a>
url2	<a href="https://www.rescue.org/">https://www.rescue.org/</a>
url3	<a href="https://www.thorn.org/">https://www.thorn.org/</a>

**Wireframes:**

Use MockFlow or another diagraming software to create layouts for your pages. Consider the following:

1. Where is your navigation going to be located on every page.
2. Will you need a footer?
3. How can you make a layout that is visually interesting and helps communicate your site content?
4. Don't forget you must have at least 2 distinctly different page layouts.

**Paste Your 3 Page Layouts Below**
